Canada and China each face major challenges in managing their water resources in the 21st Century (both quality and quantity). While one might think that such vast countries would not experience these problems, they both do, but for very different reasons. This seminar will examine the issues in each country and what, if anything, governments and citizens are doing to guard their water resources.

**SPONSORS**

**TOPIC**

Water is Life
Issues Facing Canada and China in the 21st Century

**SPEAKER**

Prof. Harvey Shear, PhD, is retired from the federal government and a Professor in the Department of Geography at the University of Toronto, Mississauga. He has developed a basin-wide management plan and a set of ecosystem health indicators for Lake Zapotlán (Mexico) and a set of sustainability indicators for Oakville (Ontario). He is presently involved in research on land use changes and water quality in the Kawartha Lakes (Ontario). Prof. Shear is a former Canadian Chair of the International Joint Commission’s Council of Great Lakes Research Managers.

7:00pm, McMaster Innovation Park, Conference Room C & D
175 Longwood Road South, Hamilton Ontario
