Mangroves: are trees or large shrubs, which grow at the boundary of the land and sea.

1 hectare of mangroves stores the amount of carbon equivalent to annual emissions from more than 330 US vehicles.

30-50% of all mangroves have been lost globally.

Benefits of Mangroves:
- Recreation
- Carbon sequestration
- Fisheries
- Spirituality
- Indigenous communities
- Animal habitat
- Biodiversity
- Tourism

Threats...
- Aquaculture
- Shrimp farms
- Pollution
- Coastal development
- Sea level rise
